

bitcoin
rhodium

Electrum for TESTNET

Tested in **Ubuntu 18.04** and **Windows**.

After installation

You must edit the Electrum BTR desktop shortcut, adding "**--testnet**" to the target:

bitcoin
rhodium

Setting up your testnet wallet

You can create a new wallet with your existing testnet seed.

1. Give the wallet a nice name :)
2. Choose "**Standard Wallet**"
3. Use "**I already have a seed**" (or you can go ahead and create a new wallet)
4. Enter the seed from the testnet wallet. Click "**Options**" and **select both options**.
Click "**Next**".
5. Enter the **testnet transaction password**.
6. Choose "**legacy**". Note the **HD Derivation Path** is for BRhodium wallets.
7. Click "**Next**".
8. Add a password if necessary or just click "**Next**".
9. The wallet is generated.
10. Try all functions. Send yourself coins to your other addresses.

**Please report all to Discord channel #testnet
(you can contact other testers and devs at same place)**

THX

BRhodium Dev Team
